better
governance

Government by Algorithm: Artificial Intelligence in Federal Administrative Agencies

REPORT SUBMITTED TO THE ADMINISTRATIVE CONFERENCE OF THE UNITED STATES

TABLE 2. TOP TEN AGENCIES AND SUBAGENCIES BY NUMBER OF USE CASES

Agency Name	Number of Use Cases
Office of Justice Programs	12
Securities and Exchange Commission	10
National Aeronautics and Space Administration	9
Food and Drug Administration	8
United States Geological Survey	8
United States Postal Service	8
Social Security Administration	7
United States Patent and Trademark Office	6
Bureau of Labor Statistics	5
Customs and Border Protection	4

FIGURE 1. AI USE CASES BY POLICY AREA

FIGURE 2. AI USE CASES BY GOVERNANCE TASK

TABLE 1. ALGORITHMIC GOVERNANCE TOOLS BY USE CATEGORIES

Use Type	Description	Examples
Enforcement	Tasks that identify or prioritize targets of agency enforcement action	<ul style="list-style-type: none"> • Securities and Exchange Commission, Centers for Medicare and Medicaid Services, and Internal Revenue Service predictive enforcement tools • Customs and Border Protection and Transportation Security Administration facial recognition systems • Food Safety and Inspection Service prediction to inform food safety site testing
Regulatory research, analysis, and monitoring	Tasks that collect or analyze information that shapes agency policymaking	<ul style="list-style-type: none"> • Consumer Financial Protection Bureau analysis of consumer complaints • Bureau of Labor Statistics coding of worker injury narratives • Food and Drug Administration analysis of adverse drug events
Adjudication	Tasks that support formal or informal agency adjudication of benefits or rights	<ul style="list-style-type: none"> • Social Security Administration system for correcting adjudicatory errors • U.S. Patent and Trademark Office tools for adjudicating patent and trademark applications
Public services and engagement	Tasks that support the direct provision of services to the public or facilitate communication with the public for regulatory or other purposes	<ul style="list-style-type: none"> • U.S. Postal Service autonomous vehicles project and handwriting recognition tool • Department of Housing and Urban Development and U.S. Citizenship and Immigration Services chatbots • Agency analysis of submitted rulemaking comments
Internal management	Tasks that support agency management of resources, including employee management, procurement, and maintenance of technology systems	<ul style="list-style-type: none"> • Department of Health and Human Services tool to assist procurement decision-making • General Services Administration tool to ensure legal compliance of federal solicitations • Department of Homeland Security tool to counter cyberattacks on agency systems

Why AI in Govt?

- Enable public sector to be more:
 - efficient,
 - responsive,
 - predictive, and
 - fair.

But we also have
this...

Google 'betrays patient trust' with DeepMind Health move

Royal Free breached UK data law in 1.6m patient deal with Google's DeepMind

Google's London AI powerhouse has set up a new healthcare division and acquired a medical app called Hark

Google DeepMind patient data deal with UK health service illegal, watchdog says

Google received 1.6 million NHS patients' data on an 'inappropriate legal basis'

Revealed: Google AI has access to huge haul of NHS patient data

Did Google's NHS patient data deal need ethical approval?

Child protection

Councils use 377,000 people's data in efforts to predict child abuse

Exclusive: Use of algorithms to identify families for attention raises stereotyping and privacy fears

▲ At least five councils have developed or implemented a predictive analytics system to safeguard children. Photograph: Alamy Stock Photo

Vast quantities of data on hundreds of thousands of people is being used to construct computer models in an effort to predict child abuse and intervene before it can happen, the Guardian has learned.

Amid mounting financial pressure, local councils are developing "predictive analytics" systems to algorithmically identify families for attention from child services, allowing them to focus resources more effectively.

But while the new algorithmic profiling could be one way of helping social

Child protection

Data on thousands of children used to predict risk of gang exploitation

Brent and Essex councils work with IBM on system to try to identify problems before they arise

By Sarah McIntyre and David...

▲ The system is also being used to profile children living in Basildon to identify those who might be unable to read or write. Photograph: David Jones/PA

Predictive software has been assessing data on the lives of thousands of children, from their potential exploitation by gangs to their risk of not being ready for primary school.

The technology company IBM has been working with Brent council to try to predict which children were at risk of gang exploitation, while Essex county council has profiled all of the children living in one of the wards of Basildon to try to identify those that might be unable to read or write.

On Sunday, the Guardian revealed how local authorities have been using machine learning and predictive technologies to intervene before children were referred to social services.

However, the programmes being run by Brent and Essex illustrate how advocates of predictive analytics believe the technology can be adapted

- “Some departments expressed concern about the safety of their data if they share it with others, especially if they cannot confirm the security arrangements in other organisations. While understandable and right, this can discourage opportunities to use data to its full potential.”

Success factors
for applying
data science & AI
in government

Guaranteeing data
privacy & security

Ensuring compliance
& accountability

Incorporating domain, political
& organisational expertise

Assuring integrative &
iterative development

Making informed procurement &
collaboration decisions

Building in-
house
capacity:
also building
trust

Data science & AI competencies in government

AI

Machine learning

Deep learning

Computer vision
& NLP

Data science

Big data

Databases

Distributed
computing

Solution development

Causal analysis

Ethics & law

Decision theory

Human-centred
design & agile

Development
& operations

Governance &
policy-making

How to build data science & AI capacities in government

Recruitment

Adapt recruitment practices & improve job attractiveness

Expertise

Establish communities of practice & centres of excellence

Cooperation

Collaborate with external experts & research institutions

Network

Strengthen interdisciplinary & intersectoral networks

Contest

Hold government-sponsored competitions & hackathons

Growth

Centralise capacities but continue to expand the base
